

Innovation, meet durability.

Environmental solutions for Alaska's leading industries.

## Our Foundation

### **Strength and stability with every solution.**

Every project presents unique challenges. Just as unique is the broad range of remedial technologies and innovative construction capabilities Waste Management provides. Together, that's a formula for something powerful – the right solution for your situation.

Equally powerful is how we deliver. Waste Management experts provide specialized support in the form of turnkey waste and sustainability solutions. Our approach combined with our expertise explains the diverse list of industries and companies who turn to us – energy services, transportation, logistics, healthcare, demolition, remediation, remote field projects and construction.

### **A safety commitment at every step of the way.**

To us, safety and communication go hand-in-hand. That's why our safety motto, "Mission to Zero," is instilled in every employee. More than a motto, it's a commitment that influences our decision making – from early in the design phase all the way through implementation. As an ISO-certified organization (14001/9001), we're well-qualified to provide technical support during your certification process.

Our communication approach plays a vital role in ensuring success at every measure – from safety and beyond. We provide a single-point-of-contact for consistency and to establish a proactive system for minimizing waste, maximizing efficiency and uncovering resource value.

### **Navigating through the regulatory landscape.**

Environmental regulations are part of everyone's world. Rather than viewing them as obstacles, we see them as another opportunity to stand out. You can count on our team – and our experience – to deliver a solution that meets your needs and those of the regulatory world. The end result is an approach that maintains the balance between needed energy production and protecting the environment.

### **A complete range of sustainable options.**

As North America's leading environmental solutions company, we design and implement sustainable solutions for the long term. We help customers minimize risks in managing hazardous materials and waste products. Our nationwide network of facilities, people and expertise can help you respond to planned and unplanned environmental challenges with timely, forward-thinking solutions.

## Our Solutions

### FIELD SERVICES

- Professional project management and facility oversight
- 10-day hazardous waste storage facility (Anchorage)
- Hazardous and non-hazardous waste management – shipping, disposal, tracking
- Medical waste management – collection, transport, disposal
- Barge, truck, rail and marine transport services – hazardous, non-hazardous
- Sustainability and waste-to-energy consulting
- Lab pack services, field labor and logistics support
- Health and safety training, and ISO certification support
- Canadian transit notice filings

### ON-SITE MATERIALS HANDLING

- Classification, segregation, packaging and disposal of hazardous and non-hazardous wastes
- Cutting and sizing scrap steel and other commodities for recycling
- Concrete pulverizing and recycling
- Dewatering, stabilization, solidification, organic amendment and nutrient amendment blending

### ON-SITE WASTE TREATMENT

- Stabilization and solidification (S/S) operations – ex-situ, in-situ
- Chemical oxidation, solidification, chemical fixation, thermal treatment and bioremediation
- Conventional excavation equipment, specialized mixing equipment, pug mills and other automated material-handling devices
- Chemical oxidation (ISCO) – in-situ

### LANDFILL CLOSURE AND CONSTRUCTION

- Comprehensive civil construction, resource protection and environmental restoration services
- General excavation and grading, soil amendments and ground improvements, poured and pre-cast concrete structure placement, drainage systems, dewatering and on-site materials handling

**WM ENERGY SERVICES
