

THE POWER OF GREEN

Strong solutions for the energy industry.

POWERFUL SOLUTIONS FOR A CHANGING WORLD.

Environmental Leadership and Expertise

Waste Management is the leading provider of comprehensive waste and environmental services in North America.

The strategic alignment of our assets enables us to deliver comprehensive environmental solutions specific to your industry.

Sustaining Growth and Profitability

The energy industry is being transformed as never before. Rigorous new environmental regulations are just some of the forces reshaping your world. There's also constant pressure to make the right long-term business decisions – and show positive results today.

For forward-thinking generators of electric power, the issues are pressing: How can you manage fly ash and other byproducts to receive the greatest economic return? How can you embrace environmental sustainability without undermining profitability? How should you handle risk and liability? What other changes are on the horizon, and how can you prepare for them?

Whether you generate energy from coal, oil, natural gas, biomass, wind, hydro, solar, or nuclear power, you can count on us to provide the service, safety and environmental compliance you need. In fact, we can give you access to a range of innovative custom solutions you may not even know are out there.

At Waste Management, we understand the challenges our energy clients face. And we have the experience and infrastructure to guide you through them.

Waste Management Ideation Network

Collaboration helps us grow. At Waste Management, we know that our service to you can only improve when many points of view are considered. That's why we regularly bring together environmental experts to keep fresh ideas flowing. Together, we are able to brainstorm, debate and share best practices that have worked in other companies and industries. This affiliation gives us the flexibility to customize solutions and offer best practices to address your company's unique needs.

Capture the Green in Energy Byproducts.

As North America's largest provider of environmental services, we can guide you to a greener future – environmentally and economically. By transforming the byproducts of power generation into marketable resources, we can help you operate more efficiently, sustainably, and profitably.

In fact, we can help you “see green” at every step in your operations, from ash management systems to onsite services and more.

Fly Ash, Bottom Ash, Flue Gas Desulfurization Residues

Properly handled and treated, these byproducts can become useful, environmentally sustainable materials. Our coal combustion product management services include on-site storage and disposal management, beneficial use applications, and permitted offsite disposal management. Acting as your agent, we can also connect you with potential users to stimulate markets for the materials.

Risk Management

Our excellent record of safety allows us to offer the industry's best indemnification package to our customers. Waste Management can help you minimize your risks and reduce the liabilities associated with legal and regulatory actions that can result from the improper disposal of the materials we handle for you.

Sustainability Services

Our experts can assess your current operations and design solutions to help reduce your environmental impact. Solutions may range from creating simple recycling plans to complex zero-waste initiatives.

Transport, Treatment and Storage

With exceptional expertise in life-cycle solutions, we can collaborate with you to determine which ones best fit your needs. And we can transport the materials for you by way of rail, truck or barge to the appropriate treatment or storage destination.

Additional Services

We are able to design, build and operate onsite management of coal combustion products. We can handle all types of waste, regardless of how they are regulated.

At Waste Management, we've helped other highly regulated businesses recover more than \$60 million in value by recycling or otherwise reusing the materials they're used to throwing away. We would welcome the opportunity to discuss how we could do the same for you.
