

Temporary Liquid Waste Tanks

Think Green.® Think Waste Management.

Companies with short-term liquid storage needs have had few options when it comes to obtaining temporary liquid storage solutions. Now, Waste Management (WM) offers its customers a wide range of portable storage tanks that can be delivered to any suitable location and remain on-site for as long as such capacity is required. These storage tanks incorporate the very latest in structural and safety technology and are serviced by the largest, most respected environmental services company in North America.

WM Temporary Liquid Waste Tanks have capacities ranging from 8,400 gallons (200 barrels) to approximately 21,000 gallons (500 barrels), and are available in both roll-off and intermodal designs. All tanks feature contoured, full-drain, conical bottoms with smooth walls and no internal bracing. This makes them easy to clean, which substantially reduces maintenance and cleaning costs. They feature both front and rear feed lines that allow tanks to be plumbed together to form an extensive storage system.

Because they are temporary in nature and are not subject to the numerous regulations that cover most permanent storage facilities these Temporary Liquid Waste Tanks are viewed as an operational expense vs. a capital expenditure. All liquid storage tanks are OSHA approved.

SPECIFICATIONS AND FEATURES

Additional features of WM's Liquid Waste Tanks include:

- Vapor secured closed-top tanks
- Phenoline #309 epoxy coating for integrity and durability
- Liquid level gauges
- Manifolds (interior or exterior)
- Integrated stairways with larger walkways and platforms
- 22" and 24" manway hatches
- "Fixed" axles for maximum maneuverability and safety
- ABS braking systems
- Safety harness clips for worker safety
- Lifting eyes for difficult tank placement
- Smooth walls for easy cleaning
- Ability to custom design for specific customer needs
- Tanks can be stored vertically to maximize volume on a limited footprint

A VARIETY OF USES

WM liquid storage tanks are appropriate for a variety of applications, including:

- Temporary storage solutions for a variety of liquid materials
 - Pipeline hydro testing and cleaning
 - Petroleum storage
 - Separation of liquids
 - Emergency storage
 - Fire water systems
 - Drilling fluid and chemical storage
 - Groundwater storage/treatment
 - Ship and barge cleaning
 - Leachate storage
 - Stormwater runoff
 - De-watering applications/Phase separation services
 - Construction/water intrusion
- Oil field fracing operations
- Industrial/maintenance and turn around activities
- Environmental and bio-remediation projects
- Cooling tower cleaning
- Excavation and SWPPP storage needs
- Refineries – interim storage solutions
- Sludge tanks and dewatering services
