

Mercury-containing materials we accept for reclamation.

Mercury-containing devices are pervasive in our country, even though many such devices are gradually being replaced by non-mercury alternatives. As North America's leading environmental solutions provider and largest processor of mercury by-products, Waste Management offers unrivaled experience, equipment and infrastructure for dealing with them appropriately.

Through our **Mercury VaporLok®** system, we offer effective packaging and transportation options to eliminate the risk of mercury and mercury vapor release during handling.

As our customer, you'll have access to complete management solutions especially appropriate for your industry, including product packaging, transportation, storage, treatment and recycling. Following is a small sampling of the products from which we routinely reclaim mercury:

Industrial Process

- Mercury-contaminated activated carbon
- Mercury-contaminated filter media
- Mercury-contaminated sludge
- Wastewater contaminated with mercury

Materials

- Calcium-phosphate powder
- Lab packs
- Mercury-contaminated debris
- Mercury-contaminated soil
- Soil profile (generic)
- COD vials
- Bulk COD materials
- Product elemental mercury

Electronic and Electrical Components

- Electronic equipment

Batteries and Power

- Alkaline batteries
- Lead acid batteries
- Magnesium batteries
- Mercury batteries
- Mixed batteries
- Silver-oxide batteries
- Wet NiCad batteries

Light and Lamps

- Fluorescent light bulbs
- Broken lamps
- Crushed lamps
- HID and UV lamps
- Non-PCB ballasts
- Non-TSC PCB ballasts
