

Think Expert in On-Site Solutions. Think Upstream.

Think Green.®

Large industrial manufacturers face enormous pressures to operate efficiently and profitably while staying compliant with local, state and federal environmental regulations. Waste Management Upstream can be a great benefit to companies that need to optimize their waste disposal, transportation and recycling operations by providing on-site expertise, advice and guidance.

ON-SITE SPECIALISTS

Waste Management Upstream program provides businesses with on-site waste professionals who specialize in minimizing the cost and environmental impact of industrial waste streams. They're supported by the nation's largest network of collection, disposal and recycling facilities, making each Waste Management Upstream representative a single point-of-contact for all waste service needs.

Experts in environmental regulations, recycling and conservation technologies, Waste Management Upstream personnel routinely serve on environmental committees, bringing specialized insight to the decision-making process.

WASTE MANAGEMENT UPSTREAM SERVICES INCLUDE:

- Management of the collection, treatment, transportation and disposal of solid, special and hazardous wastes
- Waste stream identification, profiling, manifesting and labeling
- Development, implementation and cost coordination of waste minimization programs
- Equipment optimization
- Consolidation of waste profiles to improve waste identification and handling
- Bulking of drummed wastes to reduce transportation and disposal costs
- Finding alternative uses for waste products to remove them from the disposal stream
- Assessment of opportunities for recycling solid wastes
- Right-sizing of services
- Consolidating billing into a single monthly invoice
- Providing Environmental Health & Safety (EH&S) support
- Annual volume reporting

Waste Management Upstream Services experts provide companies with full-time partners to help in the planning, execution and maintenance of waste collection, treatment, recycling and disposal programs.

- Management of third-party vendors
- Indemnification from liabilities

DATA MANAGEMENT

Upstream's Streamline data management program provides a vital mechanism for measuring and tracking all aspects of an industrial waste stream. The program gives the concise data needed to pinpoint changes in a waste stream and monitor potentially costly trends. As a management tool, it also allows Waste Management to project scenarios that can reveal untapped efficiencies in a company's operation.

This specialized program helps organize and maintain the proper paperwork for profiling, tracking shipments, recycling and disposal, as well as the information needed for accurate reporting and manifesting.
